Known Limitations, Problems, and Workarounds

During Quick Color Adjustment, the scanning process becomes slower starting with the second page

During Quick Color Adjustment, do not overload your computer with other simultaneous tasks that can use up your computer resources.

Data format in Color Sample Matching

The Color Sample Matching function does not support data containing RGB, DeviceN, or gray scale.

The logs can use up your computer free space

If your disk space is full, you can manually delete the logs from the following folders:

- Logs saved during color verification: `C:\RicohAutoColorAdjuster\ChartLog\calib`
- Logs and data saved during scanning: `C:\RicohAutoColorAdjuster\ChartLog\data`
- Images saved during Color Sample Matching: `C:\RicohAutoColorAdjuster\hotfolder_ColorMatch`
- Stored color adjustment data: `C:\RicohAutoColorAdjuster\dat_SAVE`
- Stored verification data: `C:\RicohAutoColorAdjuster\it8_SAVE`

As an alternative to manually deleting the Quick Color Adjustment scan history, use the automated function available for this purpose.

The files generated during each color sample matching job are stored in a separate folder created at the previously mentioned paths. Each of these folder names is based on a date and time template. The date and time in your folder name matches the date and time of the corresponding log file. To free up disk space, consider removing log files with a bigger size.
